WHAT IS A FRACTION?

**Directions:** For each fraction, circle the numerator. Then draw a square around the denominator.

**Definitions:**

- A fraction is one or more of the equal parts of a whole; it has an amount less than 1, like  $\frac{1}{2}$ ,  $\frac{2}{3}$ , or  $\frac{3}{4}$ .
- The numerator is the top number of the fraction that tells how many parts out of the whole there are.
- The denominator is the bottom number of the fraction that tells how many total parts of the whole there are. The denominator can never be 0.

<h1 style="margin: 0;">Decimals</h1>	<i>PARTS OF A WHOLE</i>
--------------------------------------	-----------------------------

**Directions:** Draw a line from each number to its name. Then draw a line from the number's name to its picture.

**Explanation:**

The digits to the right of the decimal are parts of a whole number. They have a value less than 1. A "0" is always written in the ones place if there are no numbers to the left of the decimal.
